

Affected Sources – Draft List for Discussion Purposes

Issue: Guidance is needed to better clarify what an “emissions from an affected source” is for the risk based compliance option being proposed for ch. NR 445, Wis. Adm. Code. The following list is intended to initiate discussion and is not intended to be an all encompassing list of affect sources under the rule.

Emissions included in the compliance option	Emissions not included in the compliance option
Direct stack	Resulting from periodic maintenance activities: Painting (exterior, railings, floors, etc.) Grounds (pesticides, fertilizers, etc.)
MACT sources	
Indoor fugitive sources	
Outdoor fugitive sources	
Resulting from conveying operations	Resulting from the use of consumer products as they were intended to be used.
Resulting from storage piles	Resulting from office activities (toner, adhesives, thinners, cleaning, etc.)
	Space heaters (BTU cutoff)
	Mobile sources
	Indirect emissions as defined by s. NR 400.02(85)
	Remediation projects covered by other rules (e.g., asbestos)
	Fork lifts and other transportation activities
	Covered under research and testing exemptions (s. NR 406.04(i))
	Naturally occurring radon
	Cigarette smoke
